

KLINGER BALLOSTAR® KHA

3-piece ball valves
DN 15-125

KLINGER FLUID CONTROL

Today for tomorrow

As a subsidiary of the KLINGER Group, KLINGER Fluid Control has been developing, manufacturing and maintaining high-quality industrial valves at the business location Gumpoldskirchen, Austria, for more than 135 years. Via the global distribution and service network, KLINGER Fluid Control offers both standardized and tailored products, services as well as solutions for customers around the globe.

Flexible production

**Transparency in
the supply chain**

**Product tests in
the in-house test
laboratory**

**Processing up to
6 tons of steel**

**KLINGER
Fluid Control
Production**

**11,000 m²
production hall**

OPERATIONAL EXCELLENCE

- » Flexible production
- » Transparency in the supply chain
- » ISO 9001 certified quality
- » ISO 14001 as well as EMAS certified environmental management system

INNOVATIVE SOLUTIONS

- » State of the art development tools
- » Product development for different areas of application
- » Compilation of customer-specific special solutions
- » Automation solutions
- » Product tests in the company-own technical center
- » A wide range of certificates and approvals

ENCOMPASSING SERVICE

- » Application expertise
- » Product trainings
- » Fast quotation and order processing
- » Customer-specific logistics concepts
- » Supply of spare parts
- » Valve maintenance
- » On-site technical support

SUSTAINABLE EFFICIENCY

Cost efficiency and reliability at its best

The KLINGER Ballostar KHA is characterized by its low costs across the entire lifecycle of the valve (total cost of ownership – TCO) as well as by its extreme longevity. Due to its modular build, only affected components need to be replaced in the course of maintenance. This significantly increases the service life of the valve in the system. The plant operator therefore profits from lower costs during plant

maintenance as well as from reduced storage and installation costs – while continuously retaining high levels of safety. With its unique design the KLINGER Ballostar KHA also offers plant operators the flexibility demanded by today's dynamic markets: Thanks to a broad selection of individually combinable modular system components, the ball valve can be equipped, refitted or even retrofitted for every possible application.

① **Cic** = Initial cost + **Cin** = Installation costs

② Start-up costs + **Co** (Operating costs (C_o)) are costs associated with keeping the plant running (more specifically energy costs associated with pressure loss).

③ Planned running costs + **Cm** + **Cs**

Cm = Maintenance costs for KLINGER Fluid Control ball valves are very low due to the avoidance of the following:
 Operating and checking the valve on a regular basis.
 Dismantling the valve to change the sealing element.
 Installation of the repaired or a new valve in the line.

Cs = Downtime costs can be very high. Emptying the pipe, repairing the valve as well as refilling and testing the network section can generate 20 to 30 % additional costs on top of the cost for the downtime.

④ Total operating Costs + **Cd** (Decommissioning cost, which is the cost incurred by companies in reversing the modifications made to landscape when a fixed asset is used up).

⑤ Life cycle costs, that incurred during the entire operating life of the valve

Body gasket	Application	Approvals/certificates Approvals
With body gaskets C4430	Applications up to 300°C: Fire Safe, TA Luft and ISO15848 applications For clear liquids and gases without solids, acids and alkalis, for high switching operations, steam, water, hot water Applications in almost all industries: District Heating / Steel / Pulp&Paper / Power plant / Oil & Gas	Fire Safe acc. API607 & EN10497 TA Luft VDI2440 ISO15848 SIL 2
With body gaskets C4430	Applications up to 300°C: TA Luft applications For clear liquids and gases without solids, acids and alkalis, hydrogen, for high switching operations, oxygen, water, hot water Applications in almost all industries: District Heating / Steel / Pulp&Paper / Power plant / Oil & Gas	TA Luft VDI2440 BAM approval when oil & grease free (KLN840) SIL2
With body gaskets C4430	Applications up to 200°C: TA Luft applications For clear liquids and gases without solids, acids and alkalis, oxygen Applications especially in the chemical industry	TA Luft VDI2440 BAM approval when oil & grease free (KLN840) PTFE seal ring with FDA approval SIL2
With body gaskets C4430	Applications up to 200°C: TA Luft applications For clear liquids and gases without solids, acids and alkalis, oxygen Applications where graphite material is not allowed Applications especially in the chemical industry	SIL2 PTFE seal ring with FDA approval
With body gaskets C4430	Applications up to 150°C: TA Luft applications For clear liquids and gases without solids Applications especially for low vacuum Applications in: Steel / Pulp & Paper / Power plant	TA Luft VDI2440 SIL2
With body gaskets C4430	Applications up to 150°C: For natural gas applications For clear gases without solids Applications in: Oil & Gas / Pulp & Paper / Power plant / Steel	Fire Safe acc. API607 & EN10497 SIL2
With body gaskets C4430	Applications up to 300°C: For liquids and gases with solid content When solids or particles are present in the fluid/gas For abrasive media Applications in: Water, Wastewater / Pulp&Paper / Power plant / Steel	TA Luft VDI2440 SIL2
With body gaskets C4430	Applications up to 400°C: For liquids and gases with solid content Special use for high temperature applications For heat transfer oils For abrasive media Applications in: Pulp&Paper / Power plant / Steel	SIL2
With body gaskets C4430	Double block & bleed Trunnion mounted Useable up to 235°C acc. to P/T diagram: For clear liquids and gases Applications in: District Heating / Energy / Steel / Power plant	DBB: certificate of DBB functionality SIL2
With body gaskets C4430	Applications up to 125°C: For ammonia applications Upstream sealing element with pressure relief hole KLN2414/8 Temperature range -35°C to 125°C Carbon steel body: Temperature range -20°C to 125°C	SIL2

TECHNICAL HIGHLIGHTS

Absolute operational safety with certified quality

FIRE SAFETY

The ball valve can be used for fire safe applications at any given time as the basic design is already certified per default. In this context, the KLINGER Ballostar KHA offers a more stable bolting of the body with shorter bolts for greater mechanical stability with regard to thermal expansion. The type-testing fire safety requirements in accordance with API Standard 607, 7th Edition, and EN ISO 10497:2010 have been officially certified.

IMPROVED CORROSION PROTECTION

KLINGER Advanced Corrosion Protection is a newly developed, special coating procedure with galvanic coating ensuring improved protection against corrosion. An impressive value of 400 h was determined in the course of a "neutral salt spray mist test" in accordance with ISO 9227. A comparison: Common phosphatization leads to 20 h, while standard finishing only results in 100 h of protection. This value corresponds to a salt spray test duration comparable with a C3 coating in accordance with ISO 12944-1.

SERIAL ANTISTATIC

The KLINGER Ballostar KHA features serial antistatic equipment in accordance with ISO 7121 and EN 1983 respectively. In this context, an antistatic ball, from DN 50 upwards, ensures the electrostatic discharge.

EMISSION-TIGHT

The standard stuffing box meets the requirements of TA Luft (VDI 2440:2000) and EN ISO 15848-1:2017. Double sealing at the body division by means of the KLINGERSIL® C-4430 soft gasket protects against external leakages and meets the highest helium emission testing requirements. The KLINGER Ballostar KHA is significantly below the requirements of emission limits to keep air clean.

OXYGEN DESIGN

Due to the fact that increased concentrations of oxygen lead to greater fire and explosion hazards, a valve must also meet certain pre-requirements in terms of oxygen.

STANDARDS-COMPLIANT MARKING

Standards-compliant marking in accordance with EN 19 is executed on the KLINGER Ballostar KHA by means of laser. The parameters DN, PN, year of manufacture, serial number, material, type and maximum temperature resistance are listed.

In-house
test laboratory

WHAT YOU CAN RELY ON

The unique KLINGER sealing system

The sealing element is the heart of every valve. The type of sealing defines under which conditions a valve can reliably execute its shut-off or regulating function. Leakages and the negative consequences resulting thereof are an immense

challenge for plant operators. A seal that keeps its promises is therefore a must.

With the new Ballostar KHA KLINGER has created a ball valve that absolutely convinces with its unique sealing system!

THE OPTIMIZED SEALING SYSTEM

A KLINGERSIL® C-4430

The fire safety requirements have been integrated into the standard design of the Ballostar KHA. The soft material gasket KLINGERSIL® C-4430 protects against external leakages and meets the highest helium emission testing requirements. The sleeve reliably holds the sealing element in the desired position. In the fire-safe version, a graphite ring additionally protects against excessive thermal stress.

B GRAPHITE GASKET

The graphite layer also protects against leakage to the atmosphere during high-temperature applications and, in combination with the KLINGERSIL® gasket, forms a double seal at the housing partition. This provides the highest degree of safety against external leakages.

C ELASTIC SEALING ELEMENT

The sealing element provides functionality across the entire lifecycle and simultaneously ensures the required contact pressure of the sealing ring. The valve therefore remains continuously tight – independent of the pressure of the medium and the flow direction.

D SEALING RING

The sealing ring forms the basis of every functioning sealing system. It stands for the highest quality and reliability in

accordance with the KLINGER standard! The fiber-reinforced sealing ring KLINGER KFC-25 consists of PTFE and graphite and is surrounded on three sides by the spring-loaded sealing element. It can thus absorb large amounts of contact force without deformation and is simultaneously protected against the medium.

As a globally leading manufacturer, KLINGER offers valves and sealing elements from one source. We pass on this synergetic benefit with more than 135 years of experience and a high degree of competence to our customers.

THE MULTI-TALENTED KHA

FLEXIBLE LIKE A SWISS KNIFE

PRODUCT ADVANTAGES

- » Maintenance-free
- » Supports pressurization on both sides
- » Bidirectional flow
- » Ball with a cylindrical full bore
- » Standard version Fire Safe certified (FF+FS)
- » Standard version TA Luft certified (FF+FS)
- » Standard version EN ISO 15848-1, ISO FE BH-CO₂-SSA0-tRT (120°C) certified
- » Greater mechanical robustness while exposed to thermal stress
- » Unique pre-stressed and elastic sealing system
- » Bidirectional sealing in accordance with EN 12266 – leakage rate A (soft seated)
- » Modular selection of system components
- » Serviceable without removal from the line
- » Antistatic design in accordance with ISO 7121 / EN 1983
- » Subsequent automation possible at any time (top flange in accordance with EN ISO 5211)

SPECIAL TYPES

- » Metal seat (up to +400 °C) for abrasive media
- » Operating stem sealed by O-rings
- » Operating stem extension
- » Oxygen version (oil, grease and silicone-free)
- » Cryogenic version (down to -196 °C)
- » Vacuum version (VV-VIT)
- » Gas version
- » Regulation design by means of V-port ball and actuator package
- » Trunnion mounted
- » Double Block & Bleed execution with drain valve

PRODUCT DETAILS

PN	16/25/40/63/100* and ASME CLASS150/300
DN	15-125 and 1/2"-5"
Housing	Cast steel, rust and acid-proof cast iron, duplex
Ball	Special materials on demand
Operating stem	Rust and acid-proof steel
Temperature	-196 °C to +400 °C
Design	Flanges, threaded connection, welding ends
Type	Three-piece ball valve

BALLOSTAR KHA-F

Flange design

GENERAL FEATURES

- » 3-piece ball valve with full bore
- » Floating ball, antistatic, lockable
- » Double tightness in both directions
- » Modular system components

CONNECTIONS

- » Flange in accordance with DIN EN 1092-1 or ASME B 16.5

DIMENSIONS

Face-to-face dimensions in accordance with EN 558-1, series 1 or dimensions in accordance with ANSI B16.10 CL 300

ACCEPTANCE TESTING

- » Seat leak tightness: EN 12266-1 P12, leakage rate A
- » Tightness to atmosphere: EN 12266-1 P11
- » Strength: EN 12266-1 P10

AUTOMATION

- » Flange connection in accordance with ISO 5211, allows for direct mounting of an actuator or by means of brackets. Pneumatic and electrical actuators utilizable.

TEMPERATURE

-196 °C to +400 °C (see pT diagram)

DOUBLE BLOCK & BLEED

The safest solution for maintenance

BALLOSTAR KHA-DBB

A single ball valve instead of two? With the Double Block & Bleed (DBB) function, we offer a perfect solution regarding lifecycle costs.

As opposed to the floating design, the 3-piece ball valve is in this case trunnion mounted. This construction alternative (for nominal widths between 15 and 125 mm) improves durability, enabling the ball valve to guarantee optimal functionality and operational safety even under the most demanding conditions.

Next to time and cost savings, the optional Double Block & Bleed function, either with a drain valve or drainage by way of the trunnion, is important in applications featuring limited installation space.

Furthermore, the BALLOSTAR KHA-DBB convinces with its sealing and safety features.

There are two different versions available:

1. Trunnion mounted
2. Trunnion mounted with drain cock (complete Double Block & Bleed solution)

INSULATION IN DETAIL

KHA ball valve fully open

KHA ball valve completely closed, dead space and ball filled with medium

Opening of the drain cock. Complete drainage of the dead space and inner space

KHA ball valve completely closed with opened drain cock. Dead space and ball completely emptied.

DOUBLE BLOCK & BLEED

The safest solution for maintenance

Many shut-off applications, especially in the steam and hot water area, require an absolutely reliable and safe barrier of the medium to avoid accidents during maintenance operations on the pipework. In such an uneconomical variant, two identical valves installed in series to ensure that in the event of a failure one valve the second can continue to be operated. The connection line of the two valves was supplemented by another valve for emptying.

THE KLINGER BALLOSTAR KHA DBB

This version consists of two elastic sealing elements and a double bearing ball. The two independent of each other acting sealing elements unite the two valves. The additional drain cock is used for a complete drainage of the dead space. The cavity of the ball valve can be drained and depressurized by opening the drain/ test cock while the KHA is in closed position. Furthermore, during operation in the closed position there can be checked whether the input-side sealing element reliably sealed.

- » Steel
- » Power
- » Geothermal Energy
- » Oil and gas
- » Chemical industry

BALLOSTAR KHA-DBB

Double Block & Bleed DN 15-40 / DN 50-125

GENERAL FEATURES

- » 3-piece ball valve with full bore and drain valve
- » Double-seated ball, antistatic, lockable
- » Optionally only as a double-seated ball valve
- » Double sealing in both bore directions
- » Modular component system

CONNECTIONS

- » Flange
- » Welding ends
- » Threads

DIMENSIONS

See previous technical data sheets for face-to-face dimensions

ACCEPTANCE TESTING

- » Seat tightness: EN 12266-1 P12, Leakage rate A
- » Tightness to atmosphere: EN 12266-1 P11
- » Body strength: EN 12266-1 P10

AUTOMATION

The flanged connection in accordance with ISO 5211 allows for mounting of an actuator by means of a console. Pneumatic and electrical actuators possible.

TEMPERATURE

- 10 °C to +235 °C (see pT diagram)
- 10 °C to +220 °C (see pT diagram)

FULL POWER

Switch on and get going!

Both pneumatic and electromechanical actuators can be used for the automation of the KLINGER Ballostar KHA ball valve. The exact determination of the torque saves investment and follow-up costs. The actuator should therefore not be

selected in accordance with the maximum possible options in mind, but rather according to actual needs. In this context the necessary pressure differential determines the torque of the required actuator.

PNEUMATIC ACTUATOR

- 1. Limit switch box
- 2. Pneumatic actuator, single or double-acting
- 3. Solenoid valve
- 4. Bracket and coupling
- 5. KHA

ELECTRIC ACTUATOR

- 1. Electric actuator
- 2. Actuator control
- 3. Bracket and coupling
- 4. KHA

ACTUATOR SELECTION

Operating moments for the different sealing rings with multi-part sealing elements

KLINGER recommends the factor of 1.5 for standard calculations, meaning plus 50 % should be used, to compensate for increased breakaway torques due to downtime. For valves featuring a reduced bore, the previous row (i.e. the one with the smaller nominal diameter) should be used.

SPECIAL SOLUTIONS EXTENSIONS

Special challenges – special solutions!

In certain applications it may be necessary to employ so-called operating stem extensions for the valve: for example in the event of necessary protective and thermal insulation layers around the valve. Limited space may also be a reason for considering an extension, for example when the hand lever cannot be mounted directly on an ISO-top flange. Extensions are available – with or without a protective tube – at a standard length of 150 mm. The protective tube is fitted with an ISO-top flange at the end of the extension, allowing for subsequent gear or actuator mounting.

Special lengths available upon request.

Special features:

- » Standard length 150 mm
- » Protective tube material 1.4408
- » Operating stem material 1.4021 (M1) / 1.4404 (M2)
- » Design featuring protective tube and ISO-top flange certified in accordance with EN ISO 5211

FULLY IN CONTROL!

Control valve for regulated rate of flow

CONTROL VALVE

Control valves regulate the rate of flow.

Depending on the intended purpose of the system, the properties of a fluid medium can fluctuate in different ways: Temperature, pressure and fluid level are common variables in this context.

The control valve comprises three main components:
1) Valve, 2) Actuator and 3) Positioner.

V-PORT BALL

For flow control and regulating applications, the ball valve model KHA is available with different v-port balls.

SPECIFICATIONS:

- » Different characteristic curves due to various ball cuttings
- » Applicable for clear media without solids
- » Easily combinable with pneumatic and electric control actuators
- » V-port ball versions are available with 10°, 30° and 60° angles as well as slotted
- » The V-port balls in the different cuttings are available for the full line size range of the ball valve model KHA
- » Soft sealing up to 230°C with KFC sealing rings in regular operation
- » To maintain the leakage rate A, the valve may only cool down when the ball is fully open or closed - not in the control position

This V-cut gives this V-port ball valve its name. The size of the V-port regulates the flow rate – from full bore to sectioned 10°, 30° and 60° as well as slotted

TECHNICAL DETAILS

Flow characteristics for the determination
of the nominal diameter

SIZE OF BALL VALVE

Flow rate	Q	in m³/h
Pressure loss	Δp	in bar
Density	ρ	in kg/m³
Velocity	w	in m/s
Flow coefficient	K_v	in m³/h
Pressure loss coefficient	ζ	

Allows for the calculation of:

$$K_v = Q * \sqrt{\frac{\rho}{1000 * \Delta p}}$$

The valve is to be selected in a manner that the K_v -value is greater, or the ζ -value less than the computed value.

or

$$\zeta = \frac{2 * \Delta p * 10^5}{\rho * w^2}$$

FLOW VALUES

DN (mm)	ζ	K_{vs} -value
15	0.24	18.3
20	0.21	35.2
25	0.19	56.7
32	0.22	88.1
40	0.14	173.0
50	0.09	329.0
65	0.09	560.5
80	0.08	910.0
100	0.07	1522.0
125	0.06	2537.0

The characteristic unit for shut-off and control valves is the K_v -value. The values provided in the table apply to a H₂O flow medium with a temperature of 5 – 30 °C, a density of 1000 kg/ m³ and a pressure loss of $p = 1$ bar at the valve.

In metric measurement systems the characteristic unit utilized is the K_v -value. In countries using inches, the characteristic unit is described by means of the cV-value. It provides how many US gal/min of water, at a temperature of 60 °F and with a pressure loss of 1 psi, flow through the valve.

PRESSURE LOSSES

$$\Delta p = \zeta * \frac{\rho}{2} * w^2 * 10^{-5}$$

oder

$$\Delta p = \left(\frac{Q}{K_v} \right)^2 * \frac{\rho}{1000}$$
