## Features:

- For discharging of slight to highly sub-cooled condensate
- Automatic air-venting during start up and operation of the plant
- Robust and resistant to water-hammer
- Integrated Check valve
- Design with internal strainer - Fig. 600  
Design with outside strainer (Y) - Fig. 601 (Y)
- Optimized design for quick installation (PN40, PN63 with R46, DN15-25)
- Gasket-free sealing of the screwed cap (PN40 and PN63 with Cap, DN15-25)
- Installation in any position (except cover/screwed cap downwards)
- Subcooling of condensate is continuously adjustable (observe the operation instructions)
- The controller maybe changed without disturbing the pipe work

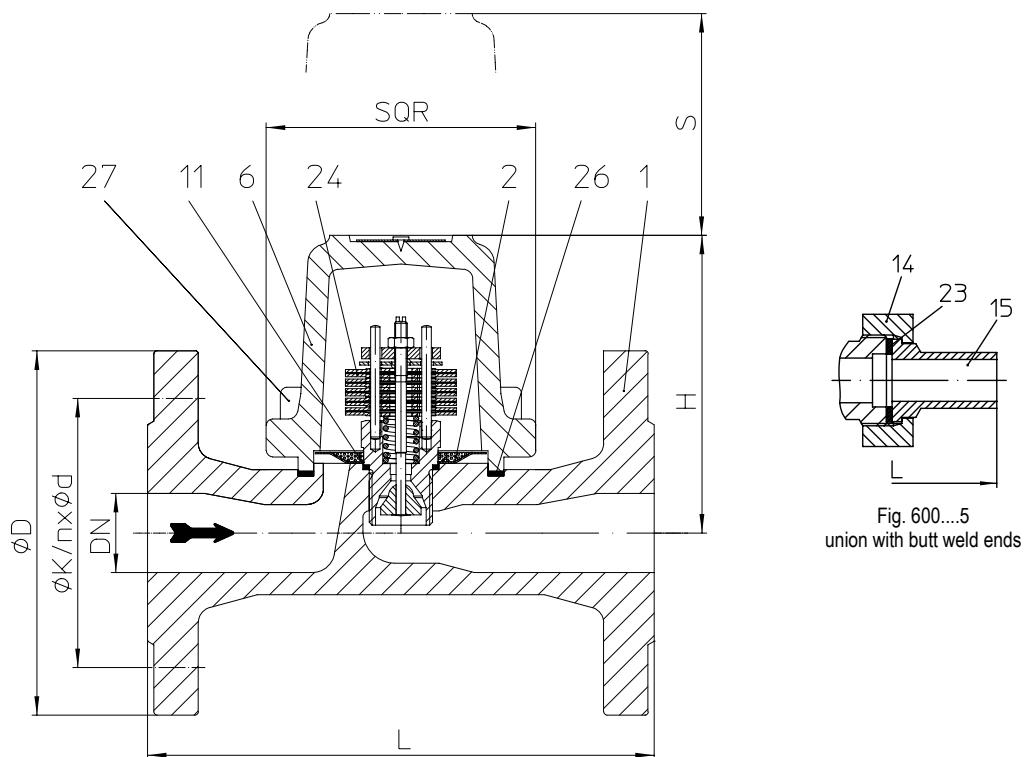

**Bimetallic steam trap (Grey cast iron)**

 Operating and installation instructions can be downloaded at [www.ari-armaturen.com](http://www.ari-armaturen.com).

**Capacity chart**

The capacity chart shows the maximum capacity at factory setting.

(Other factory-settings for the sub-cooling on request.)

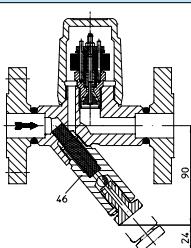

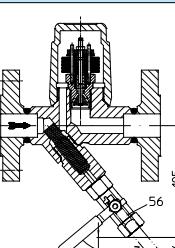

**Curve 1:** Maximum flow of hot condensate at approx. 10 K below saturation temperature.

**Curve 2:** Maximum flow of sub-cooled condensate at approx. 30 K below saturation temperature (with back-up of condensate).

**Curve 3:** Maximum flow at cold condensate at about 20°C (during start-up of a cold installation).

The condensate temperature determines the opening of the controller. Capacity is increased with the sub-cooling temperature of the condensate.

**Options**

 Outside strainer with blow down valve	 Ball valve with adapter for blow down with internal strainer (restricted to 13 bar, 200°C)
--	--

<sup>1)</sup> If the valve has a butt weld end connection, the maximum allowable design pressure depends on the outside diameter and the required wall thickness of the butt weld end. For the allowable design pressures for butt weld ends, refer to the "Butt weld end design pressures" table. Other butt weld end dimensions are available on request.

Features
• Thermostatic steam trap with non-corrosive and robust water hammer proof bimetallic controller
• Steam trap specially for high pressures
• Automatic air-venting during start up and operation of the plant
• Check valve
• With inside strainer
• Installation in any position, except cover downwards
• Subcooling of condensate is continuously adjustable (observe the operation instructions)
• The controller maybe changed without disturbing the pipe work

#### Capacity chart

The capacity chart shows the maximum capacity at factory setting.

(For operating pressures below 15 bar, a correction of the factory-setting acc. to manufacturers information is recommended.)

**Curve 1:** Maximum flow of hot condensate at approx. 10 K below saturation temperature.

**Curve 2:** Maximum flow of sub-cooled condensate at approx. 30 K below saturation temperature (with back-up of condensate).

**Curve 3:** Maximum flow at cold condensate at about 20°C (during start-up of a cold installation).

The condensate temperature determines the opening of the controller. Capacity is increased with the sub-cooling temperature of the condensate.

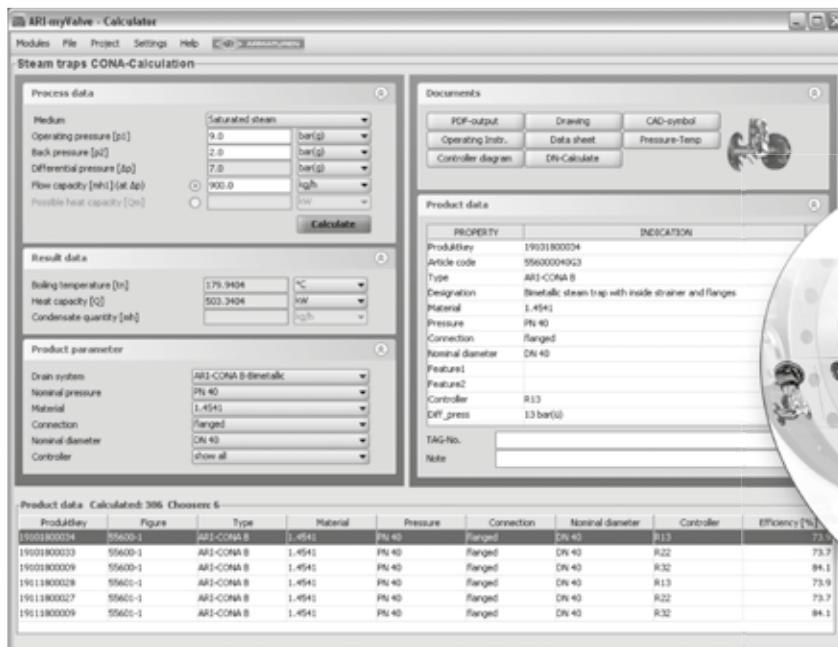

## myValve® - Your Valve Sizing-Program.

myValve is a powerful software tool that not only helps you size your system components; it also gives you instant access to all other data about the selected product, such as order information, spare parts drawings, operating instructions, data sheets, etc., whenever you need it.

### myValve - Valve Sizing-Program

#### Contents:

##### Module ARI-Steam trap CONA-Calculation

- Sizing (calculation of steam trap systems with given flow capacity or heat capacity)
- Calculation of nominal diameter acc. to given pressure, condensate quantity, condensate sub-cooling and speed

#### Media:

- Steam (saturated and superheated)
- Compressed air

#### Special Features

- Project administration of the calculation and product data incl. spare part drawings concerning to project and tag number
- Direct output or calculation and product data in PDF format
- Product data could be taken for a direct order
- SI- and ANSI-units with direct conversion to another databank
- Settings with over pressure or absolute pressure
- All ARI products are integrated in one databank
- Direct access concerning to the product on data sheets, operating instructions, pressure-temperature-diagram and spare part drawings
- Operation in company networks possible (no complex installations on individually PC's necessary)
- Extensive catalogue extending over several product groups

#### System Requirements:

Windows operating systems, Linux, etc.

**Informations about pipe welding**
**Welding groove acc. to DIN 2559**

The material used for ARI valves with butt weld ends are:

1.0619+N	GP240GH+N acc. to DIN EN 10213-2
1.0460	P250GH acc. to DIN EN 10222-2
1.0401	C15 acc. to DIN EN 10277-2
1.5415	16Mo3 acc. to DIN EN 10222-2
1.4541	X6CrNiTi18-10 acc. to DIN EN 10222-5
1.7335	13CrMo4-5 acc. to DIN EN 10222-2
1.7380	10CrMo 9-10 acc. to DIN EN 17243
1.4903	X10CrMoVNb 91 acc. to DIN EN 10222-2
1.4901	X10CrWMoVNb9-2, 1.4901 acc. to VdTÜV Data sheet 552/3

**Note:**

Note restriction on operating pressure / inlet temperature depending to design!	1.4541 X6CrNiTi18-10 acc. to DIN EN 10222-5
	1.7335 13CrMo4-5 acc. to DIN EN 10222-2
	1.7380 10CrMo 9-10 acc. to DIN EN 17243
	1.4903 X10CrMoVNb 91 acc. to DIN EN 10222-2
	1.4901 X10CrWMoVNb9-2, 1.4901 acc. to VdTÜV Data sheet 552/3

Due to our experience, we recommend to apply an electric welding process.

Because of the different material compositions and wall thickness of the steam traps and the pipe gas welding shall not be applied. Quenching cracks and coarse grain structure may develop.

On bimetallic steam traps face-to-face of 95 mm or less, the bimetallic controller has to be disassembled prior to welding. After the traps have cooled down to the ambient temperature the bimetallic controller shall be fitted again into the body.

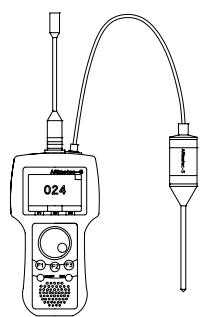

Steam traps with socket-weld ends shall only be welded by arc welding (welding process 111 acc. to DIN EN 24063).

If during the time of warranty others than the manufacturer or by the manufacturer authorized persons are interfering in the product and/or the setting, the right of claim for warranty will lapse!

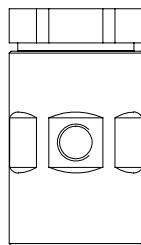

**Standard-flange dimensions acc. to DIN EN 1092-1 / -2**
