Stainless steel pressure reducers

Berluto stainless steel pressure reducers - 7-series and 8-series

In addition to pressure reducers made of brass and gunmetal, Berluto also offers pressure reducers made of high-quality stainless steel. We manufacture a wide range of standard valves that are suitable for a wide variety of applications.

The stainless steel 7-series and 8-series are made completely of V4A (1.4408, 1.4401). The EPDM seals are compliant with the EU Drinking Water Regulation (1935/2004 / EC) and they are FDA-compliant. This makes the stainless steel pressure reducers particularly suitable for demanding media such as non-flammable gases or liquids, e.g. fully demineralized water and steam; the media temperatures can be up to 200°C. In addition, the integrated inlet pressure relief ensures a constant outlet pressure even with strongly fluctuating inlet pressure.

We offer various inlet and outlet pressure ranges, nominal sizes and connection types, depending on the application. You can find detailed information in our overview on the next page.

Diaphragm pressure reducers with internal thread acc. ISO 228

DRV-type	max. inlet pressure	outlet pressure range
DRV 702	40 bar	1.5 - 6 bar
DRV 703	16 bar	1.5 - 6 bar
DRV 708	40 bar	1.5 - 10 bar
DRV 772	40 bar	0.5 - 4 bar
DRV 778	40 bar	0.5 - 9 bar

Characteristics

Standard and wide range pressure reducers are suitable for all usual applications with inlet pressures up to 40 bar. Depending on your specific needs you can choose between four different outlet pressure ranges.

The pressure reducers are suitable for the use of aggressive media, but can also be used for air and neutral gases if larger flow rates are required.

Our stainless steel series with EPDM seals meet the requirements of the EU regulation EG1935/2004 and the regulations of the FDA (Food and Drug Administration).

The metallic components in contact with the medium are made of austenitic materials such as 1.4408 and 1.4404.

This means that you can use our stainless steel series with EPDM seals without hesitation, for example in the secondary sector of the food industry.

Features

- pressure-relieved single seated valve
- diaphrahm-controlled
- continuously adjustable outlet pressure
- max. inlet pressure up to 40 bar (or up to 16 bar)
- female thread acc. ISO 228, optimally with NPT-threads
- with integrated strainer filter
- replaceable inner parts
- double-ended G 1/4" manometer fitting (for outlet pressure)
- assembly position: any desired, preferably vertical
- minimum pressure difference (inlet/outlet pressure): 1 bar
- EPDM seals with FDA conformity

Connections

DRV 878	DN 15 - DN 50	40 bar	0.5 - 9 bar
	DN 65 - DN 100	25 bar	

Characteristics

Standard and wide range pressure reducers are suitable for all usual applications with inlet pressures up to 40 bar (from DN 65 up to 25 bar).

Depending on your specific needs you can choose between four different outlet pressure ranges.

As standard, the diaphragm controlled pressure reducers are equipped with FKM-/EPDM- or NBR seals. The EPDM version is suitable for drinking water.

The flanges are manufactured according to DIN EN 1092, ANSI or JIS flanges are also available on request.

DRV 750 • DRV 850

Pressure reducers for low pressure with internal thread and flanges

DRV-Type	Connection	max. inlet pressure	outlet pressure range
DRV 750	internal thread	25 bar	0.2 - 2 bar
DRV 850	flange	25 bar	0.2 - 2 bar

Characteristics

Low pressure reducers are suitable for applications with inlet pressures up to 25 bar combined with low outlet pressures from 0.2 to 2 bar.

With the help of the enlarged control diaphragm the outlet pressure can be set sensitively and with high accuracy.

These low pressure versions are ideally suited for critical applications, whenever low pressures are required or sensitive devices will be installed downstream.

As standard, all low pressure reducers are available with internal thread according to ISO 228 and with flanges as per DIN EN 1092. On request, connection types such as ANSI, JIS, NPT or welding ends are deliverable.

Pressure reducers for high pressure with internal thread and flanges

DRV-Type	Connections	max. inlet pressure	outlet pressure range
DRV 724	internal thread	40 bar	1.5 - 12 bar
DRV 725	internal thread	40 bar	2 - 20 bar
DRV 824	flange	40 bar (25 bar)	1.5 - 12 bar (4.0 - 12 bar)
DRV 825	flange	40 bar	2 - 20 bar

Characteristics

Piston-type pressure reducers for high pressure are extremely robust. With a maximum inlet pressure range up to 40 bar and an outlet pressure range up to 20 bar this series is ideally suited for numerous demanding applications.

Due to the robust piston design these types react less sensitive to pressure shocks than diaphragm pressure reducers.

The missing diaphragm reduces the seals contact surface of piston-type pressure reducers. That is why this valve type is perfectly adapted for applications with highly aggressive media.

As standard, all high pressure reducers are available with internal thread according to ISO 228 and with flanges as per DIN EN 1092. On request, connection types such as ANSI, JIS, NPT or welding ends are deliverable.

DRV 832-D	flange	16 bar	2 - 5 bar
DRV 838-D	flange	16 bar	4 - 10 bar

Characteristics

The DRV series 73x/ 83x were specially developed for use with steam applications up to 200°C. The carefully selected materials ensure optimum steam resistance in this range.

All nominal sizes are equipped with a removable cartridge for easy maintenance. We offer our steam pressure reducers with female thread (ISO 228 or optional NPT - ASME B1.20.1) and DIN flanges (optional ANSI, JIS) as standard.

About us

Berluto Armaturen-GmbH is a medium-sized manufacturer of high-quality control and safety valves for use in buildings and industrial applications.

Particularly in the field of pressure regulators, float valves and safety fittings, a wide range of products and a sophisticated modular system mean that the right fitting can be supplied for almost any application. All Berluto quality fittings are manufactured exclusively at the company's site in Tönisvorst (Lower Rhine) using high-quality materials (red-bronze, brass, stainless steel). Computer-aided development methods with direct CAD/CAM connection to CNC machining centres allow flexible production with consistently high precision and short throughput times.

This allows larger valve series as well as special valves tailored to customer requirements to be produced with the well-known high Berluto quality. At the end of the production chain, computer-controlled testing facilities ensure that the finished valves are subjected to one hundred percent functional testing and quality assurance. Despite modern development and production methods, our employees have retained an essential Berluto characteristic: a love of detail and first-class craftsmanship.

Today, all Berluto valves benefit from a know-how that has grown for a century in the development, design and manufacture of special valves, pressure reducers, float valves and overflow valves in angle and straight form.

ACCESSORIES

REPAIR KITS & SPARE PARTS

Fast order processing

You will receive offers and order confirmations from us usually within 24 hours.

Short delivery times

70% of all products can be delivered within 48 hours. If it is particularly urgent, we will gladly organize express delivery.

Commercial support

Our sales team is always available to answer your questions about order processing in a competent and reliable manner.

Technical support

Technical advice, spare parts, drawings & STEP files or solutions according to customer requirements. Together with you we will look for the right solution!

Production in Germany

We manufacture and assemble our products exclusively in Germany. This ensures highest availability and quality.

Tradition obliges

We have been an internationally successful manufacturer of valves for 100 years and are a reliable partner for our customers.
